The **MatriX X2#** is an automated inspection system designed for sophisticated high-speed inspection in SMT production. Transmission X-ray Technology with patented Slice-Filter-Technique™ (SFT) present a reliable solution for the inline inspection of double-sided PCB assemblies. The X2# movable detector axes allow high-speed off-axis image acquisition from different angles and directions with maximum image quality and resolution.

**MIPS_Tune** is an off-line programming software package for test program generation with automatic CAD import and for graphical application parameter tuning. It features an automatic inspection list generation based on an advanced algorithm library for transmission and off-axis joint inspection.

Proprietary **Tree-Classification** technique with integrated automatic rule generation, graphical measurement & yield display for program optimization. The verification software module **MIPS_Verify** with its closed-loop repair concept is capable of in-line or off-line verification using a graphical board layout display and X-ray image with defect marking. Support of multiple inspection modes with parallel viewing of transmission oblique view and optical images of the same defect for easy and reliable defect verification.

**MIPS_SPC** – process control tools for real-time and history statistics.
